Weekly Briefing

SKYView: Short Squeezes, Sentiment, Spending, and Surprises

Despite a calendar full of activity – an FOMC meeting, the start of Q4'20 earnings season, the release of key economic indicators, etc. – it was a group of retail investors posting on Reddit that dominated most of the financial headlines over the past week. Less attention-grabbing but nevertheless relevant for markets, the FOMC left rates and the pace of asset purchases unchanged, while financial results out of early reporters imply that Q4 will be another quarter in which double-digit upside earnings surprises remain the norm. In this *Weekly Briefing*, we break down key events of late January and their potential impact on high yield markets.

A David vs. Goliath-esque battle between amateur traders and some of the most well-known hedge fund managers began in earnest last week, with a Reddit subforum called "WallStreetBets" inciting a short squeeze in several stocks. Most notable among the targets was GameStop, whose stock skyrocketed 1,745% (YTD through January 27) as a result of the power struggle between professional and amateur speculators. The carnage quickly spread to other tickers with sizeable short interest, leading to some of the worst total return sessions for long/short hedge funds in history. Importantly, the disruption to high yield market trading was minimal, even among constituents with heavily shorted public equities. As demonstrated in the tables below, members of the ICE BofA US High Yield Index (H0A0) caught up in the drama have not, through the time of publication, experienced the same magnitude of volatility in their underlying bond prices.

GameStop (GME) Stock Chart

daily data, Jan 1 to Jan 27

Prominent Short Squeeze Targets

through Jan 27

Name	Ticker	Short Interest (%)	YTD Total Return
GameStop	GME	123	1745%
AMC Entertainment	AMC	13	839%
Bed Bath & Beyond	BBBY	66	198%
Nokia	NOK		68%
Russell 2000 Index	**RTY**		**7%**

Bond	Ticker	Rating	YTD Total Return
GME 10% Notes due '23	GME	B2/B-	3.8%
AMC 10.5% Notes due '25	AMC	Caa2/CCC-	37.6%
BBBY 3.75% Notes due '24	BBBY	B1/B+	1.8%
NOK 3.375% Notes due '22	NOK	Ba2/BB+	0.4%
ICE BofA US High Yield Index	**H0A0**		**0.3%**

In complete opposition to the drama unfolding on social media, the January 26-27 Federal Open Market Committee meeting appeared relatively devoid of surprises. The Committee left guidance on rates unchanged and maintained the current pace of asset purchases ($120bn per month). In Fed Chairman Powell's subsequent remarks, he admitted that the pace of the recovery has recently "moderated," but also pointed to "an improved outlook" later in 2021. On the topic of inflation, Powell noted that any potential liftoff in rates was tied to sustained inflation in excess of 2%, and emphasized that any initial inflation driven by a "burst" of spending as a result of a re-opening would likely be transient, not necessarily triggering FOMC action.

Key Takeaways from Fed Chairman Powell's Speech

January 27, 2020

Negatives	*Positives*
"Following a sharp rebound in economic activity last summer, the pace of the recovery has moderated in recent months..."	"In contrast, the housing sector has more than fully recovered from the downturn, supported in part by low mortgage interest rates."
"Household spending on services remains low, especially in sectors that typically require people to gather closely, including travel and hospitality."	"Business investment and manufacturing production have also picked up."
"And household spending on goods has moderated following earlier large gains."	"While we should not underestimate the challenges we currently face, several developments point to an improved outlook for later this year."

Source: SKY Harbor, Federal Reserve

Consistent with Fed Chairman Powell's remarks on a moderating recovery, recently released SCE Household Spending Survey data shows that the median increase in monthly household expenditures decelerated to +1.6% in December, down from +1.9% in August. Expectations for spending in the coming year, however, increased to +3.0%, up from +2.2% in August, as consumers remain optimistic for an eventual re-opening. Also notable are changes in large purchases, with an increase in spending on Electronics and Home Appliances funded via a reduction in Vacation expenditures. These trends appear consistent with Q3'20 corporate earnings releases, and hint toward the continuation of spending to enhance home comfort – a theme that has been reflected in underlying portfolio positioning.

Finally, though Q4'20 earnings season has just recently begun, we note that growth continues to surprise to the upside. The strong historical earnings correlation between small cap equities and high yield issuers provide a positive read-through for our market, though only an admittedly small portion of constituents (14%) have reported thus far. Nevertheless, we remain mindful that earnings relative to expectations – more so than absolute earnings growth – drive returns, and we therefore remain optimistic for high yield spread compression in the coming quarters.

Russell 2000 Index (RTY)

Q4'20 Earnings Summary (14% have reported through publication)

Sector	Q4'20 Earnings Growth	Q4'20 Earnings Surprise
Energy	514%	71%
Materials	-23%	67%
Industrials	-69%	-10%
Consumer Discretionary	38%	17%
Consumer Staples	44%	78%
Healthcare	-6%	36%
Financials	24%	28%
Technology	30%	20%
Comm. Svcs / Telecom	-45%	-17%
Utilities	NM	NM
Real Estate	32%	26%
All Securities	12%	26%

Price Reaction vs. Earnings Surprise

A showdown between Wall Street and Main Street was the main attraction over the past week, but we believe relatively dovish commentary from the Fed and a strong start to Q4'20 earnings season represent the most relevant news for high yield markets. With tapering seemingly off the table and corporations continuing to adjust to new market realities, our optimistic view for spreads over the intermediate term remains intact.

Important Disclosures and Disclaimers

Investing in securities involves risk of loss and past performance is not necessarily indicative of future results. Fixed income securities, especially high yield debt securities, are subject to loss of income and principal arising from credit risk, which is the risk that the issuer will be unable to make interest and principal payments when due. Material risks in investing in high yield debt securities also include, but are not limited to, opportunity cost (the risk that an issuer's credit trends deteriorate resulting in a higher level of compensation demanded by the market relative to the initial investment), interest rate risk, liquidity risk, selection risk, and overall market risk. In general, issuers of high yield debt securities have a greater likelihood of defaulting on the payment of interest or principal than issuers of investment grade bonds. There can be no assurance that the investment objectives described herein will be achieved or that substantial losses can be avoided.

Gross performance results do not reflect the deduction of investment advisory fees, which would reduce an investor's actual return. For example, assume that $1 million is invested in an account with the Firm, and this account achieves a 6% compounded annualized return, gross of fees, for five years. At the end of five years that account would grow to $1,338,226 before the deduction of management fees. Assuming management fees of 0.55% per year are deducted annually from the average annual AUM, the value of the account at the end of five years would be $1,302,846, which is the equivalent of an annual compounded rate of 5.43%. For a ten-year period, the ending dollar values before and after fees would be $1,790,848 and $1,697,408, respectively. SKY Harbor's asset-based fees are generally billed monthly or quarterly in arrears. Please refer to the SKY Harbor's ADV Part 2A or applicable Offering Documents for more information on fees. Consultants supplied with gross results are to use this data in accordance with SEC, CFTC, NFA or the applicable jurisdiction's guidelines.
